This office action is responsive to communications filed 11/12/2003.

Claims 1 – 26 are pending.

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11 recites the limitation “wherein the peripheral portion of the base includes a first alignment member” in lines 1 – 3. This limitation is inconsistent with the disclosure. See lines 3 – 6 of the specification and the figures. The alignment member in the base is in its central portion and the limitation in claim 11 is interpreted as such in this office action. It is also noted that “members” in line 6 needs to be replaced with - - member - -.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4, 9 -14 are rejected under 35 U.S.C. 102(b) as being anticipated by Le Valley (US 1,634,949).

Le valley discloses (Figs. 1 – 6) a pressure relief valve comprising: a base (A) having a central portion and a peripheral portion, a plurality of openings (B) extending through the base; A plurality of flaps (J) for closing the openings in the base, each flap

Art Unit: 3753

being associated with at least one opening, an inner end of each flap connected with the central portion of the base via a fastener (G) and a connector on the base (G). Alignment members (S and T) are provided in the base and the flaps respectively for positioning the flaps with respect to the base.

It is noted that recitations pertaining to disposing the relief valve with respect to a vehicle are regarded here as reflective of intended use and are not being given any patentable weight in this rejection.

5. Claims 1 - 4, 12, 14 - 18, 23, 25 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Frank et al. (US 5,695,397).

Frank et al. discloses (Figs. 1 - 4) a pressure relief valve for relieving air pressure from a passenger compartment of a vehicle, the valve comprising:

A base (68) having a central portion and a peripheral portion (see fig. 4), a plurality of openings (74) extending through the base; a plurality of flaps (76) an inner end of each flap connected to the base via a fastener (adhesive), a connector including a rim on the base configured for securing the pressure relief valve to the vehicle (Figs. 1, 2).

It is noted that the arrangement disclosed in Frank et al. necessarily performs the method recited in claims 15 - 18, 23, 25 and 26 in its usual and normal operation.

6. Claims 5 - 8, 19 - 22 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3753

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
